

## **Tridacna squamosa**

*Linnaeus, 1758*

**BIG ONE! VERY FRILLY LIGHT PINK SPECIMEN. 123 mm  
Philippines. This specimen very large for color tridacna.  
Yellow or red color is characteristic only for small and young  
specimens. It is one with very large and wide blades.  
Very hard to get red tridacna a similar size (almost 13 cm).**
