

Eucrassatella donacina

Origin: S.W. Aust.

Author: Lamarck 1818

Size: 128mm.

Grade: F2

"*Smooth Crassatella*" The previous common name was "*Giant Cockle*" This piece dwarfs the current world record size as stated in the 5th edition of the *World Record Shell Registry*. This was 121mm added in the year 1995. Surface wear around the umbo area as would be expected of one of this size & age. Very thick & heavy at 483gms. An excellent addition for the size minded collector. No longer collected since the area is now frequently patrolled by white pointer sharks.
