

*Pustularia Tuamotensis Takahashii* (Moretzsohn, 2007). Location: W Shore, Maui, HI. Grade: Gem. Size: 18.7mm. Notes: This *Cypraea Pustularia Tuamotensis Takahashii* was self collected on Scuba on a night dive in perhaps 10ft or less where the sand meets the reef line way back inverted under a dead coral outcrop mixed in the same area I found the *Mauiensis* in. This *Takahashii* IS THE BIGGEST of my trip and was just cleaned out yesterday to give it that fresh out of the ocean
