

*Cribrarula exmouthensis rotnestensis* Lorenz 2002 F++, 29 mm, Rottnest Island, Western Australia. This shell is of interest because it belonged to the world-leading *Cypraea* expert F. Lorenz, who also named this particular species. The shell is in overall good condition (please see photos for more information) - a few minor blemishes on dorsum, but entirely overglazed and quite an attractive piece
