

Cypraea friendii, Very Dark Pattern, 76.3mm, Australia Shell

This is a *Cypraea friendii* that is 76.3mm in F++ condition (gem terminals but has a naced over depressed area near the anterior end of the dorsum).

- Beautiful very dark pattern on the specimen.

Found in Western Australia. Collection data provided with the shell. White spots on the shell are from the camera
