

Cypraea Granulata (Pease, 1862). Location: N Shore, Oahu, Hawaii. Grade: Gem. Size: 22.8&29.0mm. Notes: These Cypraea Granulatas were self collected on a night dive just inside a lava tube on its left sidewall in a slight crack nestled together in a small hole, I rarely find a mated pair together for Granulatas. Both Granulatas are EXTRA DARK, AMAZING wide blue mantel lines and are GEM GEM.....the larger one has a nice ROSE hue to its margins. You will not find a DARKER PAIR ON EBAY. Just found and cleaned out giving it the Fresh Out Of The Ocean Look.
