

This is a *Cypraea mauritiana* that is 107.0mm in F++ condition (light line and a couple light scratches on the dorsum - very minor for a shell of this size).

- Excellent, dark pattern on the specimen.

- Heavy shell.

- HUGE. Nice condition for such a big one. No chips on the ends. Very tough to get them like this.

Found on the island of Oahu, Hawaii. Hawaiian shell. Collection data provided with the shell. White spots on the shell are from the camera. Shipping costs can be combined on multiple wins.
