

Cypraea(Mauritia)Mauritiana (Linnaeus, 1758). Location: E .
Shore Oahu, HI Grade: F+++ Size: 101.5Wmm. Notes: This
Cypraea(Mauritia)Mauritiana's was self collected on a night
dive 2-3ft crawling on the open reef, found in a super high
surf area and snuck in on a rare calm day. This Humpie is
EXTRA DARK as seen in all the photo's, excellent bleeding
calloused margins, you can just see the purple hued spots
underneath the dark covering, really nice base. It does have
micro pings over the whole shell but 98 percent are under the
nacre and smooth to the touch.
