

Cypraea(Mauritia)Mauritiana (Linnaeus, 1758). Location: W. Shore Maui, HI Grade: F+++ Size: 94.0x69.7wmm. Notes: This Cypraea(Mauritia)Mauritiana's was self collected on a night dive 2-3ft crawling on the open reef, found in a super high surf area and snuck in on a rare calm day. This Humpie has a gorgeous PURPLE spotting that only comes from ones in Hawaii, this is the only one we picked up and kept from Maui, nice WIDE and FAT, it does have lineage that you can slightly feel running you finger over them and micro pings on the off margin, Base looks very clean as are the anterior and posterior tips that are smooth to the touch
