

*Mauritia mauritiana*

N Shore Oahu, HI , F+/++ ; 114.3mm.

Notes: This *Cypraea*(*Mauritia*)*Mauritiana*'s was self collected on a night dive in 10ft on a large rounded boulder in my secret N Shore spot, I carry believe it or not socks in my BC pocket as it keeps them from clanking together so this one was socked right away :) Well what can you say about this one hmmm, Monster Size, super hard to get one this big, nice elongated anterior tips, just HEAVY AND MATURE, this one has been through some rough water as the spot I got it from sometimes gets up to 50ft in the winter time. Issues are very very clearly seen in all the pictures.
