

CYPRAEA STERCORARIA - SPECIAL PATTERN SELECTION SENEGAL 74.8 mm

Quality: F+++ I see the typical little flaws found on most of even the best stercoraria, but in my opinion high quality for this species.

Collected: Collected by local diver at 5 to 10 meters on rocks at Les Almadies Point, Cap-Vert Peninsula, Senegal, 1980 - 2000.

Comments: Very selected specimen from an outstanding old collection.
