

**Cypraea (Afrozoila) teulerei**, *Cazanavette, B., 1846*

**Fantastic globular MONSTER! Hypercallus and very dark! 55.1 mm  
F++/F+++**

Oman. Monster sized. One of the best specimens ever collected of the ultra rare. Only a handful of specimens of these havy dark giants were ever found at this level of quality. Extra wide and heavy specimen with very clear pattern! Good quality. Impossible to get now in this size. It is diamond for any Cowrie collection. This one was collected by me in December 2016 to a new secret location
