

CYPRAEA TURDUS WINKWORTHI

Quality: F+++/GEM I see only a very minor little flaw near the front end. Almost everybody would call GEM.

Collected: Collected by diver on rocks with sea grass and algae at 1 to 3 meters off Masirah island, off the East coast of Oman, December 2016.

Comments: Super size specimen with a super dark pattern. Awesome size over 50 mm. We selected only the best of the best.
