

**Pleuroploca salmo 125mm 98g, (Wood, 1828),
Bahia San Basilio, Sea of Cortez, on sandflats
among seagrass in 12m depth, live taken
specimen shell**

**This large specimen is special for its
beautifully colored aperture and a massive
98g weight body which is crowned by
prominent shoulder knobs of contrasting dark
color to the body. A beautiful and attractive
shell, carefully cleaned and preserved in
excellent all natural condition.**
