

Meiocardia cumingi

A Masterpiece shell for its shape and sculpture, hard to obtain without the usual predator drill.

One out 70-80 when such big is without hole!

Remarks: often traded as *Meiocardia moltkiana*, but that species is much smaller and less sculptured

Aliguay Island, Mindanao, Philippines, 2013
trawled at 50-80 m depth.

68 \$, Mars 2016
