

Mitra Ustulata (Reeve, 1844). Location: S Shore, Oahu, HI Grade: F+++/Gem. Size: 31.1mm. Notes: This Mitra Ustulata was self collected on a night dive in 35ft on top of a very large slab of rock. EXTREMELY RARE miter, just found, PERFECT tip, extra dark, well corded, I only see this ever couple of years if that. Don't let this Mitra Ustulata through your fingers
