

***Eburna glabrata* (Albino form), Linnaeus, 1758**

**Very RARE! 58.1 mm. F+++.** Plus one more specimen (44.7 mm) with regular color for compare  
**Venezuela. Big size. Stunning colors. Representative live taken, with natural flaws. Impossible to get now in this size. Pictures don't do this shell any justice. The white spots on the shell are from the camera.**

**8 \$, May 2016**
