

## Perotrochus quoyanus

this was collected with a deep-sea submersible and found at around 650 feet off the coast of curacao. This shell was sold years ago through substation curacao using my e-bay account and last year one of the old buyers contacted me asking if i was interested in buying it back from him due to financial problems, i said sure. It measures 2 x 1.5 inches.  
pleurotomariidae from curacao
