

*Ophioglossolambis violacea* (Swainson, 1821) - BRIGHT, CONTRASTING INTENSE COLOUR WITH SUPER EXTENDED DIGITS! BEST SCULPTURE! Chocolate brown markings on a cream-white base, coupled with PERFECT, UNBROKEN and MATURE DIGITS! True to its name, it has an INTENSE VIOLET APERTURE COLOUR that PERMEATES THROUGH THE SHELL ON THE TOP. This is really one of the TOP QUALITY SPECIMENS I have handled. A RARE CLASSIC, and even rarer these days. Despite a small, highly negligible scar on the dorsum this shell is unquestionably the BEST in the Lambis genus! Like always, it will start at a very REASONABLE PRICE and may the quality of this shell decide the price.

Size: 112mm      Quality: Gem- (Best for this species)
