

**Astralium rotularia**

**Origin:** N.W. Aust.

**Author:** Lamarck 1822

**Size:** 40.1mm.

**Grade:** F1

"*Rotary / Knob / Star Shell* " The world record size for this species is 47.5mm established in 1999. Therefore this shell should be considered a good size piece.

Some signs of age to be expected at this size with a worm trail beneath the last whorl distorting the typical shape. Displays very well.
