

**ERICUSA SOWERBYI - NICE AUSTRALIA ± 225 mm  
F+++/GEM -**

Quality: F+++/GEM I see no important flaws. A growth imperfection on the spire.

Collected: Wrong data on the label. With the help of a friendly Australian: **This volute is *Ericusa sowerbyi* Kiener, 1839. It is found on the East Coast of Australia from Tasmania to Coffs Harbour. This is probably from the Sydney area.**

Comments: Natural lip, perfect spire and canal with a nice pattern. Old shell with still nice color.
