

AMPLUSTRUM AMPLUSTRE - BEAUTIFUL MARQUESAS
16.3 mm

Quality: GEM There is a tiny inclusion on this specimen, but this species is impossible to find in 'perfect' condition. Rated gem because this specimen is the best I've encountered in a while.

Collected: Collected by snorkel in sand at less than 1 meter in Anaho Bay, Nuku Hiva, Marquesas Islands, October 2014.

67 \$, Feb 2019
