

**AMPLUSTRUM AMPLUSTRE - BEAUTIFUL MARQUESAS**  
**16.9 mm**

Quality: GEM There are some growth lines on this specimen, but this species is impossible to find in 'perfect' condition. Rated gem because this specimen is the best I've encountered in a while.

Collected: Collected by snorkel in sand at less than 1 meter in Anaho Bay, Nuku Hiva, Marquesas Islands, October 2014.
