

Conus bengalensis, (Okutani, 1968)

125,50 mm; F+++

Trawled by Thai fishing boats at 80-120 meters deep, off Racha Island, Phuket, Thailand (05/2019)

beautiful pattern & color. live taken & i should say perfectly nice intact apex for this size. fully matured with natural thick lip. for this giant, this is a very attractive & hard to get with this condition. part of the lip by the corner (spire side) was trimmed due to small crack from the trawling. very minor nick on lip & canal.
