

circumciscus 44mm LOVELY DARK COLOR CORDED  
SURFACE BEAUTY

**Conus circumciscus (Born, 1778), Sangihe  
Island, Maluku Sea, from 50m depth, live  
taken specimen shell.**

2. Description: **Strongly corded and sculpted  
surface give a wavy appearance to the  
margin of this shell which is of course all  
natural and untouched. Splendid tricolor body  
with dark bands. Choice beauty with flawless  
growth all over. If shells would get their price  
tags according to their beauty,  
a circumciscus surely wouldn't be an easily  
affordable one.**
