

*veillardii* da Motta

Live collected, delicious bright orange pink pattern on cloudy pearl grey. Mino flaw on the upper outer lip, probably caused by positioning the operculum.

A vintage shell, almost impossible to get nowadays.

From an old French collection

Remarks: A very elusive species, due to its remote locality it is missing in most collections.

Glorieuses Islands (North West off Madagascar, but claimed by Seychelles)

204 \$, Mars 2016
