

Conus milneedwardsi, *Jousseaume, 1894*

Ultra rare! Gorgeous Dark! 78.2 mm

South Red sea. Eritrea. Superba! Fantastic shells! It's not funny, but almost no specimens of "Nominative" milneedwardsi in the collection has this look. 99% of all Conus "Glory of India" that are in collections are Indian C. milneedwardsi clytospira, which have been caught by thousands in recent times. If you compare these two subspecies, the difference will be enormous.
