

## **SOLANGAEAE - NICE LAVANONO 20.3 mm F+++/GEM**

Quality: F+++/GEM Please see below.

Collected: Lavanono, Madagascar.

Comments: Very selected out of many specimens. Most of these shells are dead. They wash up on the beach in big surf. Because of the dangerous waters it is almost the only way to get them. Sometimes the lip is enhanced and it is hard to see. But the quality of this selection is far above average
