

violaceus

Origin: Madagascar

Author: Gmelin 1791

Size: 47.2mm.

Grade: G-/G

"*Tendineus* / *Violet Cone*" The common name *tendineus* is a former synonym by *Lightfoot 1786*. Found across the Indian Ocean this one from Madagascar. Displaying typical coloration but are highly vivid. Hard to fault. One of those "stand out" pieces that immediately catches the eye in a drawer full of Cones.
