

Mitra rubrum-4.70mm. F++ Hawaii Micro Red Miter Shell-Hawaiian Specimen Seashell

**an excellent Hawaiian Red Miter Shell--Mitre rubrum---
Broderip, 1836.**

This excellent micro shell measures approximately 4.70mm. by digital caliper and is in F++ condition with an excellent, slightly nibbed protoconch, wonderful color and pattern and cool sculpting. This specimen is about average size for the species and was found on the North Shore of Oahu in beach drift. It has some sand in the aperture which we decided to leave. Please be aware that this is a MICRO shell and as such is very small-usually 1/4" or smaller in size. It is not always possible to get totally clear photos of these tiny shells, but we do our best to show as many views as possible.
