

## **Fusitriton magellanicus**

**Origin:** S.W. Aust.

**Author:** Roding 1798

**Size:** 123mm, 126mm.

**Grade:** F2

" *Magellanic Triton* " Deep water trawled. The common name is taken from two dwarf galaxies orbiting the Milky Way? Anyway, this species are found all white with some brown spotting or staining. Very little difference in any of them apart from size. The surface structure is latticed with axial & lateral ribs. As good as they come.
