

Cymatium (Linatella) caudatum 69mm 19g
MAGNIFICENT INFLATED BEAUTY

Cymatium (Linatella) caudatum (Gmelin, 1791), Tuticorin Bay, Tamil Nadu State, South East India, by local fishermen on sandy bottom with dispersed rocks by nets set in 25m depth, live taken specimen shell.

2. Description: Nine pictures which can be viewed in XXL size, so I think this large and attractive piece is fully documented; the body is strongly sculptured with prominent ribs and knobs. Grown without any irregularity, much less bites, an interesting shell indeed.
