

Cypraea Caputophiddi (F.A. Schilder, 1927). Location: N Shore, Oahu, HI. Grade: F+++/Gem Size: 26.2x20.2w Notes: This Cypraea Caputophiddi was found a few tidal just before I was going to jump in for my dive. It is DEPRESSED, CRISP clear pattern, VERY dark, has KILLER VERY HIGH STRETCH MARKS that you can clearly see in all the pictures, just a beauty, only issue if any is a slight micro color spot or two on the base area. Just found and cleaned out giving it the one of a kind fresh out of the ocean look. Don't let this JUST CLEANED OUT DEPRESSED specimen slip through your fingers.
