

Cypraea Caputophiddi (F.A. Schilder, 1927). Location: N Shore, Oahu, HI. Grade: F+++/Gem Size: 28.3x23.0w Notes: This Cypraea Caputophiddi was found a few tidal just before I was going to jump in for my dive. It is the MOST DEPRESSED I have seen in a very long time, CRISP clear pattern, VERY dark, almost STRAIGHT MANTEL line, just a beauty, only issue is one small ping on the base that you can feel with your finder tip but is naced over very well, really nice stretch marks showing how really mature it is. Just found and cleaned out giving it the one of a kind fresh out of the ocean look.
