

chinensis somaliana

Lorenz 1989

Dredged at 100m off Natal , South Africa. Large mature and calloused based specimen. Pale dorsal markings with blotch. This I compare with fm somaliana as it has the same carectariztics . It also very different from the normal dredged or dived form. Maybe 1 in a 100 dredged look like this. Very fresh crabbed. No drills perfect base.

32,53mm
