

friendii f.insulata

(Raybaudi, 1985)

Diver, at 20-24 meters on sponge on reef

Starvation Boat Harbour, Western Australia

81.8mm

F+++

Classic, however bulbous & slightly humped shape  
- deep, rich pattern with dark chocolate spotting - dark brown & white margins blending into a brown base  
- glossed over micro flake inside labial posterior terminal however not effecting terminal profile or front edge - a few typical very soft & discreet lines - borderline F+++/GEM- grade - an attractive shell & a nice representation of the species!

95\$, Oct 2016
