

*Cypraea fultoni amorimi massieri* (Lorenz, F., 1991),  
F+/F++, 75mm.

In the photo you can see the teeth defect at the base.

Intravital defect, possibly after mollusk injury.

There is a small chip with enamel and a mesh of  
microcracks on the dorsum.

South Mozambique, Russian trawl fleet, , 90 - 110 meters.
