

**Umbilia hesitata; Impressive live taken specimen.**

**This is a rare opportunity to obtain an impressive example of this spectacular south eastern Australian endemic species. Trawled from 25 fathoms of water off eastern Victoria in Bass Strait.**

**At 102mm this is an impressive dark coloured example of Umbilia hesitata. This specimen is in remarkable condition, with only a small 'dimple' on the dorsum, which is only visible when the shell is examined closely**
