

**Cypraea Hesitata howelli 101mm F+++ Amazing albionc
porcelain**

Trawled 200 nmls north of gabo island. Beautiful specimen, a very attractive super white albionc form shell, a small chip in posteria canal and anterior canal but no distraction from its beauty No growth lines ,these are extremely hard to get these days in gem condition, super nice extremities ,fully mature adult, this is much nicer in the hand.
