

*Cypraea Isabella Controversa* (Gray, 1824). Location: S.E. Shore, Oahu, HI. Grade: F+++/Gem or better(both) Size:11.5 36.1mm. Notes: These *Cypraea Isabella Controversa*'s were self collected on Scuba on a night dive in 30ft on the side of a ledge out in the open. The size difference is amazing when I found these two together as I almost missed the MUCH smaller male. The larger one is very fat and HIGH THICK calloused, excellent markings and the smaller male also is a very nice specimen but more of the non descript with a lighter color
