

**Cypraea jeaniana trawled off shark bay by taiwanese boats  
in 70'.**

**F++/+++.** Growth line on dorsum as seen in pictures.  
62 mm.

**Superb little specimen with clear dorsal color and  
beautiful margins. At first sight we can tell that it is an  
intermediate between jeaniana and jeaniana aurata. Even  
with its small but natural flaws it stays a very nice  
specimen that displays extremely well.**
