

**ZOILA JEANIANA JEANIANA SHERYLAE - BEAUTIFUL
POINT QUOBBA 66.2 mm**

Quality: F+++/GEM Has a small line (about 1 cm long) on the dorsum at the anterior canal. Visible on photo 4. Some sandgrains, but we do not consider these as flaws.

Collected: Collected by diver D. Edinger at 31 meters deep on blue spirastella sponge, off Point Quobba, Western Australia, May 4th, 2018.

Comments: Almost none found in the past 3 years because of the deterioration of sponges. Recently a small number of specimens was found. They have slightly deviant colors
