

Zoila jeaniana sherilae, Raybaudi, 1990,

61.5 mm. nice, dark color shell endemic of Western Australia

- Fully mature, very dark, well callused shell with beautifully dotted colorful callus. F++/Gem-.
- There are snow flake dots on the base (visible on last photos) very common for this specie, otherwise Gem.
- Shell is already faded been collected in 2006, no more color loss - very main thing for all Zoila.
- Live collected on Geodia sponge by SCUBA diver at depth 25 meters, Quobba, Western Australia

215 \$, May 2020
