

Cypraea(Lyncina)Leviathan (Schilder & Schilder, 1937). Location: N Shore Oahu, Hawaii. Grade F+++ (88.1) F+++ / Gem (69.1mm) Notes: These Cypraea Leviathan's were self collected on Scuba on a night dive in 30ft just inside a lave tube on its ceiling in a crack both were touching when I picked them up, a true mated pair. Just found and cleaned out both have that XDARK look, very heavy and mature with really nice wrap around nodules with a extended margin, as you can see in the last picture base shot the larger ones base is EXTREMELY DARK (also close to perfect) and the smaller one is lighter as some are, the larger ones issues are lineage on top, with a few pings and things here and there, the smaller one has a few micro sand spots on the base but is clean on the top area's
