

Lyncina leviathan

N Shore Oahu, HI F+++/almost 76.5mm

Notes: This Cypraea Leviathan was self collected on Scuba on a night dive in 25ft in a HUGE open cave in one of the many cuts on its sidewall. Just found and cleaned out before the auction, this one is HEAVY, MATURE, DARK, HIGH side marginal callous, BEAUTIFUL purple teeth, issues are 5 micro white pimples and 2 micro micro dimple, slight lineage on the off marginal area that will fade as the shell lightens in color, very normal for this type of shell.

39 \$, Oct 2019
