

Large and superb specimen of *Luria lurida* (Linnaeus, 1758)
F+++ , 43.8 mm, Cape Verde Islands, now available. This is
an outstanding piece with incredibly vivid canals, richly
contrasting between dark charcoal and saturated peach,
somewhat rostrate, and with a beautifully proportioned
dorsum with subtle silver banding across a dark ground.
Stunning pastel base. A few minor growth marks on the
dorsum, but overall in very good condition
