

Mauritia) Maculifera Hawaiiensis(Depressed Form)
(Schilder & Schilder, 1937).

Location: N Shore, Oahu, HI.

Grade: F+++/Gem or better; Size: 65.0x49.3wmm.

Notes: This Cypraea Maculifera Hawaiiensis Depressed Form was self collected on Scuba on a night dive in 15ft or less in a super thin cut off the main ledge. This Mac is DEPRESSED, with WIDE FAT xtra DARK margins and a round DARK blue base that leans forward as it is that rounded, rippled margins you can feel with your finger tip, only issue I could see was a slight glossed over scratch on the top that almost looks like it natural pattern but can barely feel with your finger tip.
