

*mappa viridis* f. *guamensis* that is 67.8mm and in Gem condition.

- Super pattern on this specimen.
- Great side spotting and dark basal blotch.
- These have been tough to get in recent years and this is a striking shell.

Found on the island of Guam. Collection data provided with the shell. White spots on the shell are from the camera

61 \$, June 2016
