

Zoila Marginata *f. consueta*

Origin: W. Coast W. Aust.

Author: Biraghi 1993

Size: 54.1mm.

Grade: F2.

" *Marginate Cowry* " A special deep water shell displaying a few dark spots on a mostly pale background. Not as large as the shallow water shells but is typical of those found in deeper waters. An immediate eye catcher "*stand out*" piece among the bunch. Has a small disturbance on the inside of the left posterior canal but hardly offensive. I like this one despite the grade.
