

Pustularia Mauiensis (Burgess, 1967). Location: W Shore, Maui, HI.
Grade: Gem. Size: 12.1mm. Notes: This *Cypraea Pustularia Mauiensis* was self collected on Scuba on a night dive in perhaps 10ft or less where the sand meets the reef line way back inverted under a dead coral outcrop. This HUGE *Mauiensis* was just cleaned out yesterday to give it that fresh out of the ocean look.
